

LoopCheck

Keep approved behavior intact as AI changes your app

Implementation architecture | Version 0.5.2 | Strands Agents SDK

Acceptance is a versioned decision

can_accept = active scope exists + every requirement has a confirmed flow + every flow passes + current source and contract match + this is the latest check. Interrupted, stale, empty or uncovered scopes never pass.

Local edition and public evaluation

Local: trusted project directory + running loopback preview + MCP. Public: bundled samples only, isolated sessions and persistent state. Keyless walkthrough uses disclosed presets; live planning uses the configured provider. AgentCore is not deployed.
